

# EER to Relational

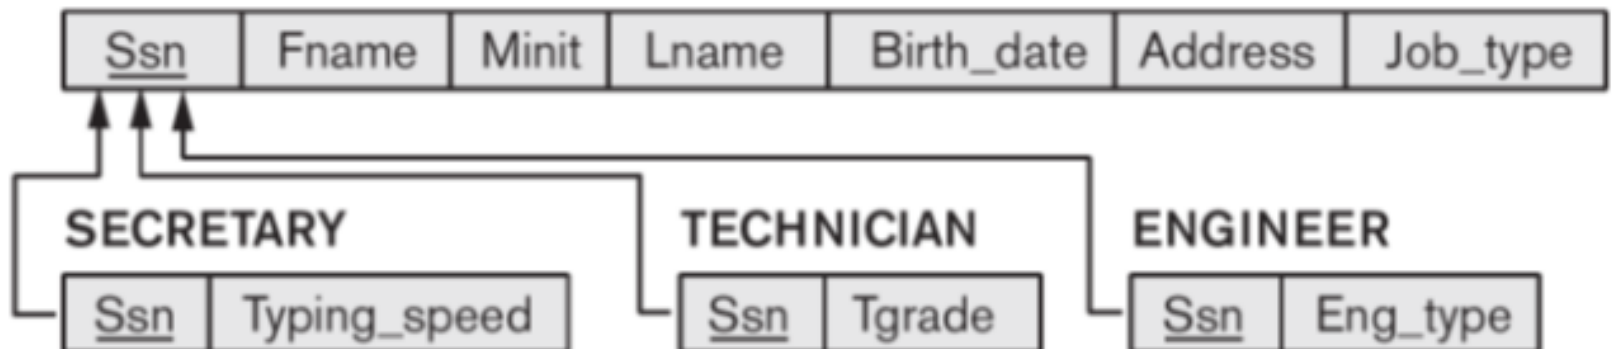

---

- Options for Mapping EER
  - Multiple relations
    - one for the superclass and one for each subclass
  - For any specialization (total or partial, disjoint or overlapping)
  - PK of subclass relation is FK to superclass relation.

# EER to Relational

(a) EMPLOYEE

# EER to Relational

---

- Options for Mapping EER
  - Multiple relations  
but only for subclasses
    - Only for subclassing that is total
    - If specialization is overlapping there can be entities represented in more than one relation

# EER to Relational

## CAR

<u>Vehicle_id</u>	License_plate_no	Price	Max_speed	No_of_passengers
-------------------	------------------	-------	-----------	------------------

## TRUCK

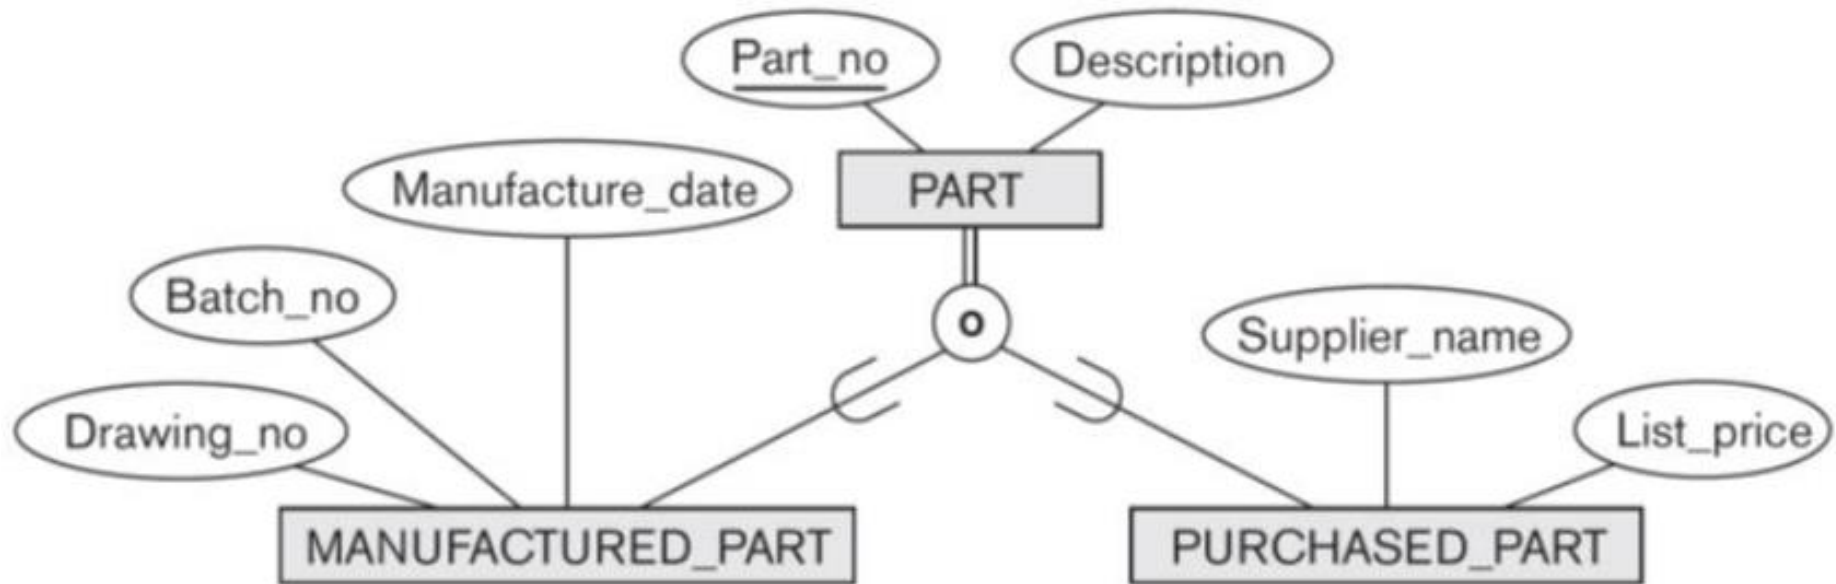

<u>Vehicle_id</u>	License_plate_no	Price	No_of_axles	Tonnage
-------------------	------------------	-------	-------------	---------

# EER to Relational

---

- Options for Mapping EER
  - Single relation representing all classes including one **type** attribute
    - A type attribute indicates subclass
    - Subclasses must be disjoint
    - Potential for generating many NULL values if many specific attributes exist in the subclasses

# EER to Relational

) PART

<u>Part_no</u>	Description	Mflag	Drawing_no	Manufacture_date	Batch_no	Pflag	Supplier_name	List_price
----------------	-------------	-------	------------	------------------	----------	-------	---------------	------------
